

Adults' Perspective on Transportation Initiatives in Manizales, Colombia

Katelyn C. Morrison, CLAS Seminar & Field Trip

1 Introduction

Statement of Purpose

The objective behind this study is to better understand the impact of current and potential transportation initiatives on the quality of life from the perspective of adults in Manizales, Colombia. This study attempts to determine which certain factors, such as health, safety, and technology, the people of Manizales consider when assessing the impact of transportation initiatives on their quality of life. Additionally, this study seeks to identify how individuals predict other possible transportation initiatives might impact their quality of life in the future.

Research Question

In which ways do certain factors such as health, safety, and technology of current transportation initiatives relating to biking and bike sharing systems positively or negatively impact the quality of life among adults in Manizales, Colombia? How do they perceive potential transportation initiatives impacting their quality of life?

Subproblems

1. To what extent does the safety of the current infrastructure and initiatives positively or negatively contribute to an individual's quality of life?
- 2.
